

EANO Coin White Paper

1. Introduction

EANO Coin is a decentralized cryptocurrency built for African empowerment and indigenous resilience. It represents economic liberation through indigenous values and community-driven technology. EANO stands for the four Igbo market days: Eke, Afor, Nkwo, and Orie - symbols of time, trade, and tradition.

2. Cultural Inspiration

EANO draws power from Igbo cosmology. The four market days are not just economic markers but spiritual symbols of balance, rhythm, and indigenous governance. EANO uses this framework to build a future-focused, culturally rooted digital currency.

3. Tokenomics

Total Supply: 350 million EANO Coins

- No pre-mined coins
- No VC allocations
- Community-first distribution
- Long-term sustainability over pump-and-dump schemes

4. Mining System

Mining is mobile-based and modeled after trust. Users can mine once every 24 hours.

Anti-bot Strategy:

- Proof of personhood (KYC, device fingerprinting)
- CAPTCHA and time-based mining sessions
- Penalties for multiple account abuse

5. Use Cases

- Peer-to-peer payments
- Local and global marketplaces

- Secure store of value
- Community voting and decentralized governance in future

6. Roadmap

Phase 1: Launch website and white paper

Phase 2: Develop mining app prototype

Phase 3: Implement miner trust logic and wallet system

Phase 4: Launch beta marketplace

Phase 5: Governance token and DApp expansion

7. Founder

This project is led by a pseudonymous founder: Santus Santorum. This anonymity is necessary due to political repression and anti-Igbo sentiment in Nigeria. The focus is on the mission, not the individual.
